

Siminfulad

Production and export
of steel products

Siminfulad

Established to meet the needs of the construction industry and other sectors dependent on steel products, Siminfulad has continually sought to enhance product quality, develop modern technologies in production, and expand both domestic and international markets. With a team of experienced engineers and specialists and the use of advanced equipment, Siminfulad has become one of the key players in the industry

Siminfulad

Leveraging its extensive experience in exports, Siminfulad exports its products to various countries. The company's focus has been on expanding export markets in the Middle East, Europe, and East Asia, and it has become one of Iran's main steel exporters by establishing stable business relationships and building trust among international customers

Steel Rebar

The rebar produced by Siminfulad is widely used in construction and industrial projects due to its high strength and long durability. These rebars are available in various sizes and conform to national and international standards, offering high resistance to pressure and environmental forces

The rebars come in sizes ranging from 6 mm to 32 mm in diameter and are used in various construction and industrial projects. The company's rebar is made of high-strength steel and provides good resistance against environmental factors such as pressure, heat, and earthquakes. They include plain rebar (A1) and deformed rebar (A2, A3, and A4), depending on project needs and types of structures.

Production and export galvanized wire

The galvanized wire produced by the company is made using modern galvanization methods, providing exceptional resistance to corrosion and rust. These wires are used in various industries, including electrical, telecommunications, agriculture, and fencing. The galvanization coating (zinc coating) enhances the wire's lifespan and resistance to moisture and adverse environmental conditions. Due to the galvanization process, these wires are particularly suitable for humid and corrosive environments such as coastal areas. Siminfulad's galvanized wire is used in the electrical, telecommunications, and agricultural industries, as well as in the production of mesh and fences.

Siminfulad

Galvanized Fencing

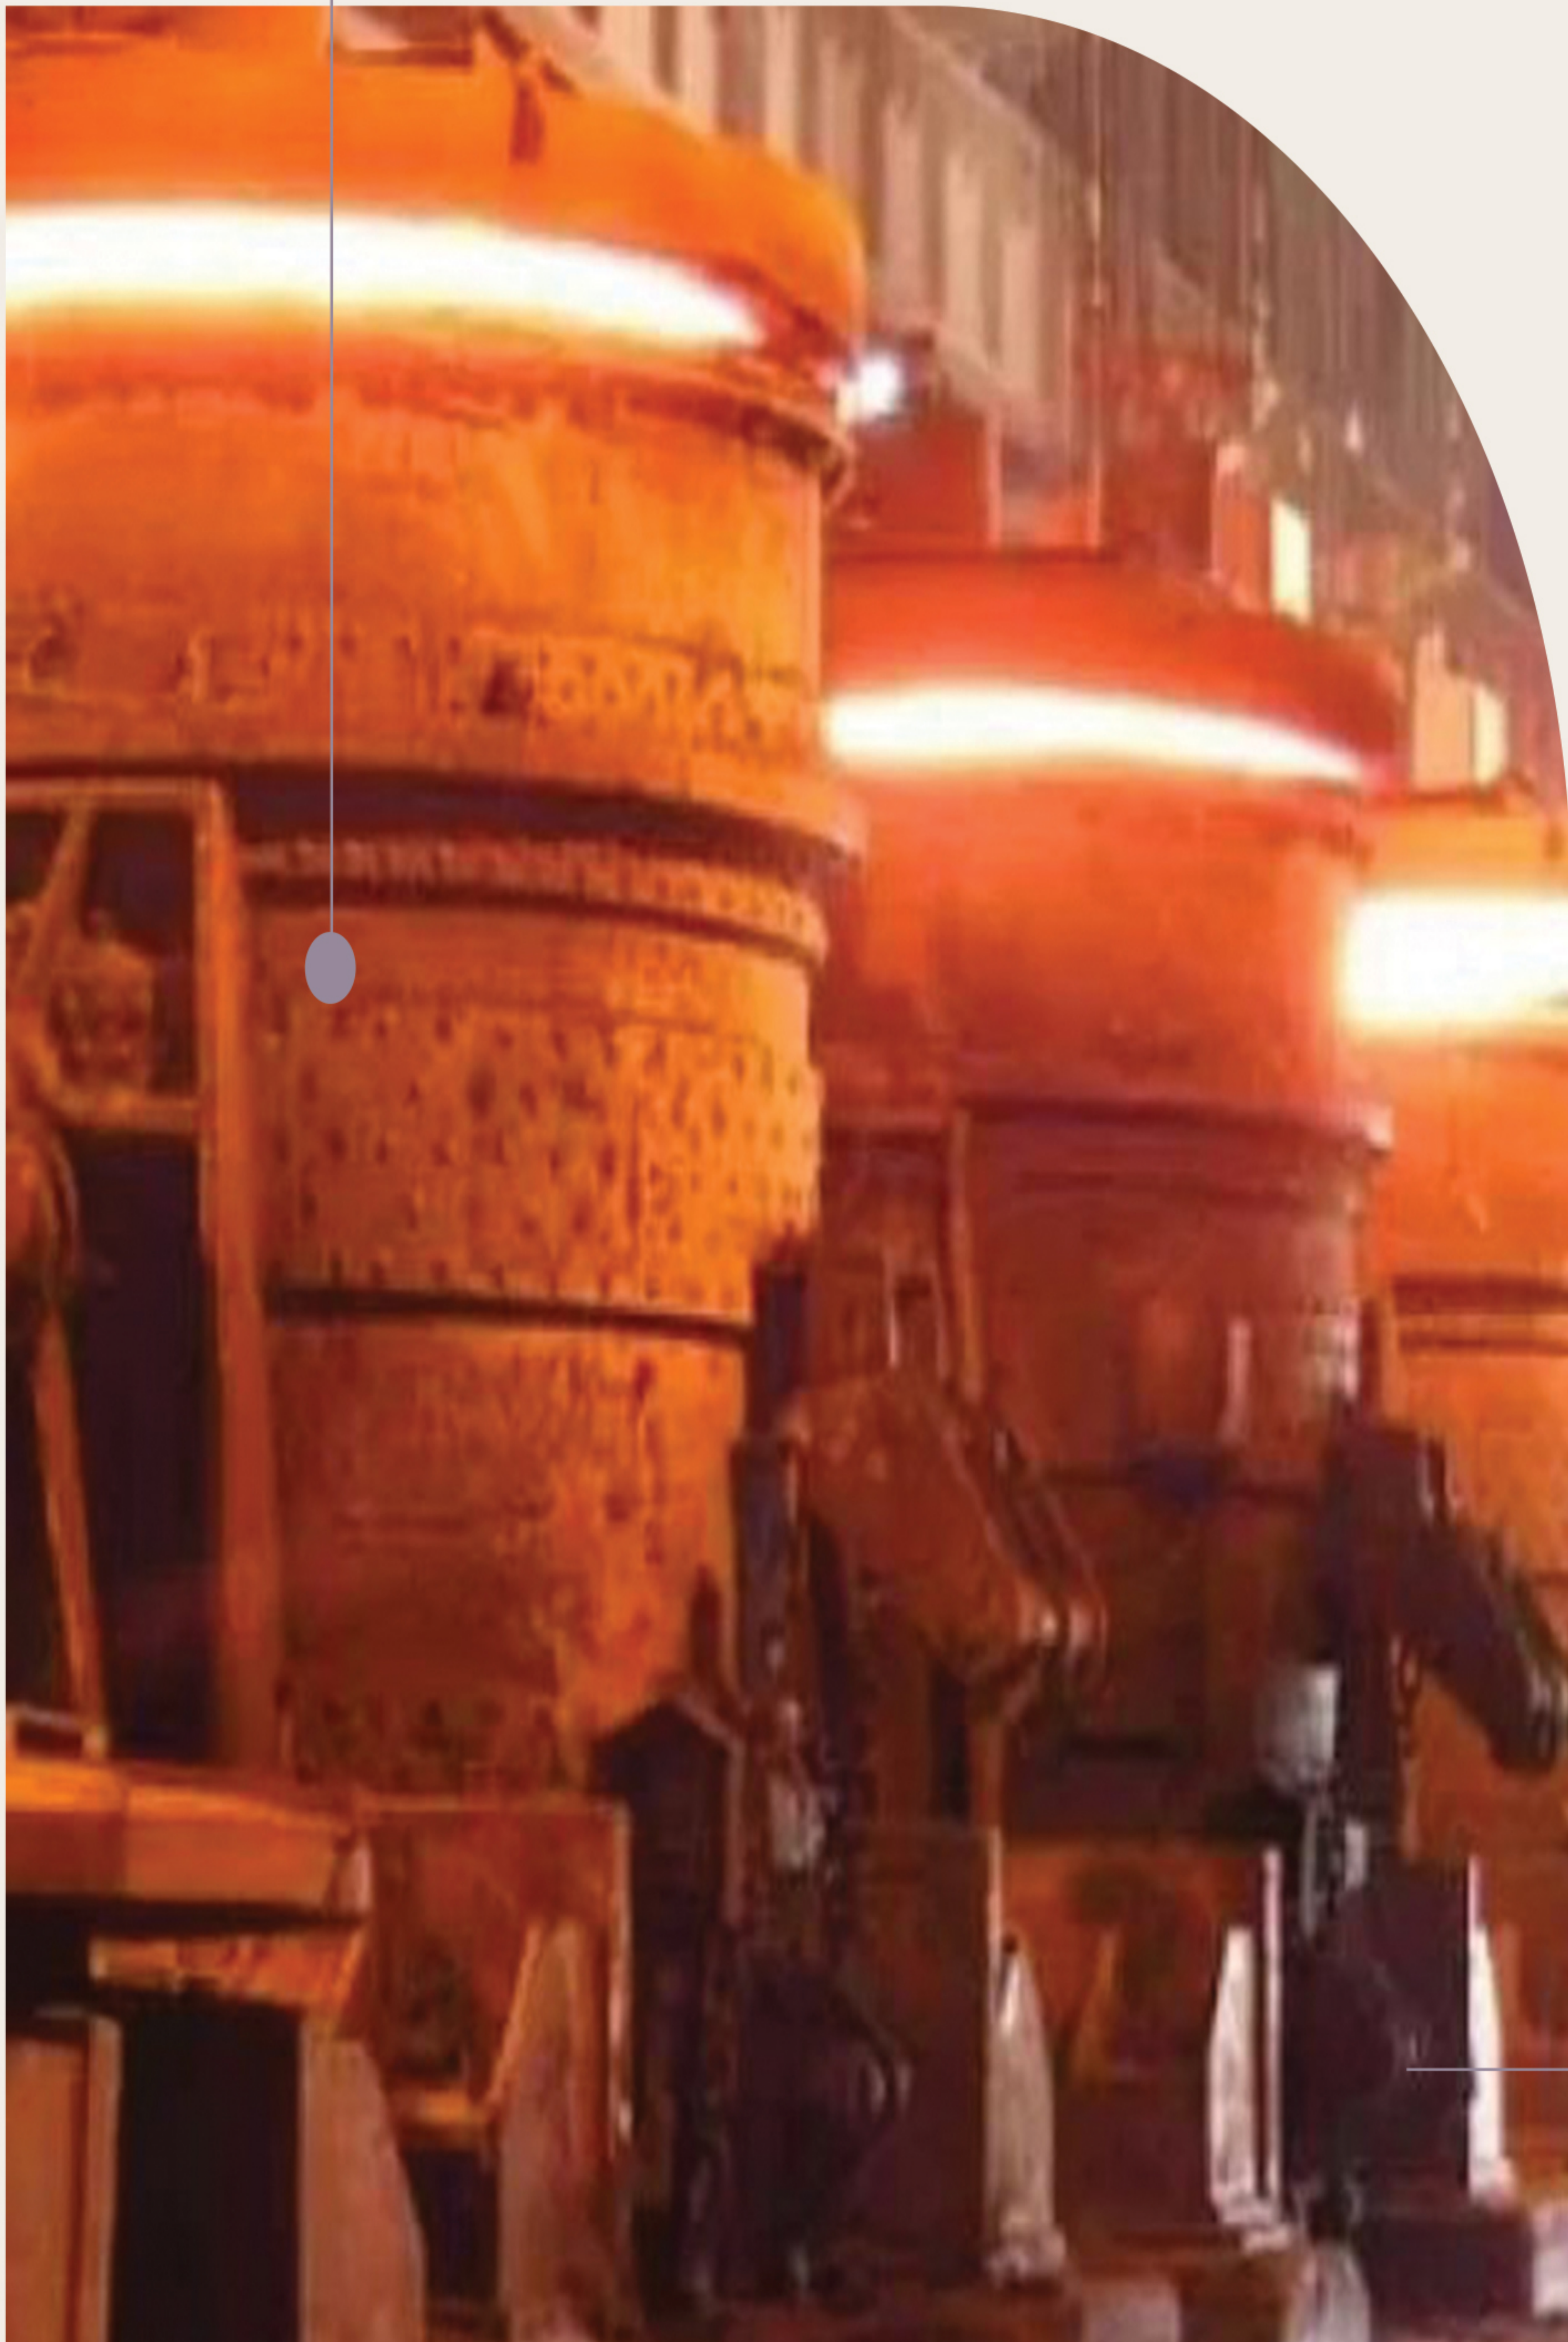

Siminfulad's galvanized fencing is produced as a durable and stable product for use in protective and security projects. The galvanized coating makes these fences resistant to adverse weather conditions and rust, providing a longer lifespan compared to similar products. The galvanized coating ensures that the fences have a long lifespan and are resistant to environmental factors like moisture and rain. This product is used for protecting and dividing various areas, including agricultural, industrial, sports, and urban spaces

The Siminfulad logo, consisting of a dark grey circle followed by a horizontal line and the word 'Siminfulad' in a bold, dark grey sans-serif font.

Siminfulad

By producing various types of rebar, galvanized wire, and galvanized fencing, Siminfulad has met the diverse needs of different industries. These high-quality products, with their resistance to environmental factors and variety of applications, are recognized as reliable choices for construction, industrial, and .protective projects

Siminfulad

Siminfulad

Siminfulad's mission is to provide steel products of the highest quality and services at global standards. The company operates based on values such as quality, innovation, sustainability, and customer satisfaction and always strives to meet customer needs in the shortest time and with the highest level of quality
